

Interpreting the descriptions:

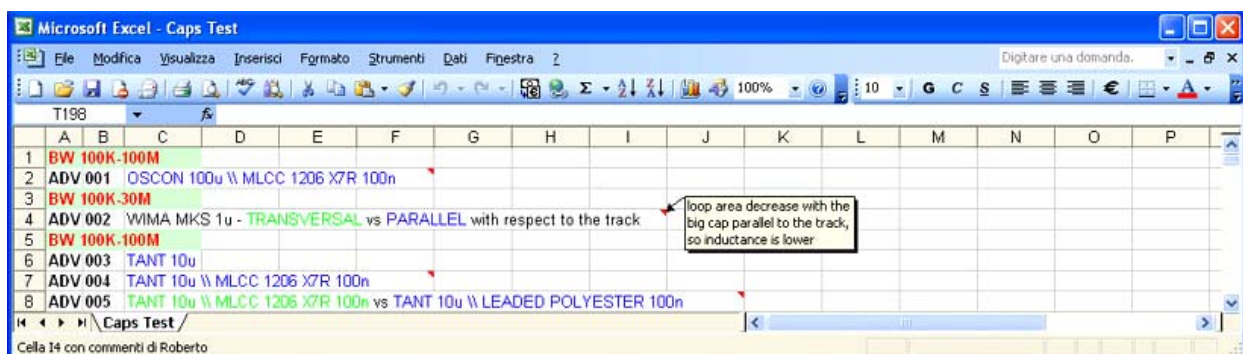

- 1) **OSCON 100u + Ferrite 601 1206 \\\ muRata MLCC 0805 X5R 10u** means: **OSCON 100uF** shunt to ground, **Ferrite** with impedance **600 ohm** at 100MHz in case **1206** series with the signal, **muRata Multi Layer Ceramic Capacitor** in case **0805 X5R 10uF** shunt to ground.
- 2) **OSCON 100u \\\ (MLCC 1206 X7R 100n + series 0R27 0805)** means: **OSCON 100uF** shunt to ground, **MLCC 1206 X7R 100nF** with series 0,27 ohm resistor in case 0805, **BOTH** shunt to ground.

I suggest this way of visualizing plots and comments on your screen:

Browse graphs from "plots" folder with your default image visualizer and scroll Caps_Tests with MS Excel ...otherwise it is easy to lose the way!!

There are also some hidden comments at the end of some descriptions:

Place the pointer on the cell with red triangle to show the comment.

Have fun :-)

Roberto
